36266-00003

ABSTRACT OF THE DISCLOSURE

Provided is a technique for entering a file selection by simultaneously displaying a first region, a second region and a third region. Displayed on the first

5   region is a list of categories of files. A first selection of one of the displayed categories is then input, so as to identify a selected category. In response to the first selection, a list of the files in the selected category is displayed on the second region. Thereafter, a second selection of one of the files displayed on the second region is input, so as to identify a selected file. Then, in response to the second selection, a

10 name for the selected track is displayed on the third region.
